

Rapid Sliding Door

Suitable for high speeds

The Rapid Slide Door is a one of a kind door system, exclusively manufactured by Ventura Systems C.V. Using innovative technologies, we have developed a door that fits your needs perfectly. The closing and opening time of this door system is reduced considerably, which enables the vehicle to continue its journey quickly and smoothly.

Little maintenance is needed as the door system is designed with as few parts as possible, resulting in an overall longer life-cycle and less chance of errors or failures. The design maximizes the space for passengers to enter and move around the vehicle. Wind and water will not enter the vehicle through the doors thanks to the in-house developed rubbers which ensure that the doors are closed extremely well. The doors are pulled against the aperture by the door's levers which results in maximum stability of the door and its frame.

Ventura Systems C.V. has produced innovative door systems for urban public transport since 1994. Our innovative technologies and global presence have made Ventura Systems C.V. a marketleader in the industry. The modular design of our door systems allows them to be adapted to any requirement so we can offer custom engineered products. Ventura Systems C.V. is ISO 9001/2015 certified.

We welcome millions of people every day

Features

Pneumatic or electric
Single or double leaf
Width: 860 or 1100 mm
Opening/closing time: 3/4 seconds
Speed test: 100 km/h
All control options available

Glass types: Standard, isolated
and heated
Sensitive edges
Designed according to EU regula-
tion ECE R107
15% slope approved

Global Service Network

We send service agents on a regular basis to our clients. These will provide guidance in the installation of the doorsystems in the vehicle, solve possible errors and provide extra training when necessary.

All Ventura Systems C.V. door systems are designed according to EU regulation ECE R107.
